

C++ Functions: Complete Guide Covering Every Aspect - w9school

C++ provides some pre-defined functions, such as `main()`, which is used to execute code. But you can also create your own functions to perform certain actions.

ABOUT

w9school is an online programming education platform, offering concise articles to teach various programming languages. The platform emphasizes practical learning, providing students with opportunities to enhance their coding skills through interactive exercises. With a commitment to simplicity and effectiveness, W9school invites users to explore programming concepts, from basics to advanced techniques, in a supportive online environment. The platform refrains from making any specific claims, prioritizing a focus on learning and skill development for aspiring programmers. We are constantly improving ourselves, so if you find any mistakes, kindly contact us, and we'll make sure to update that information.
